Bus Ticket Booking App: UI Design Report

Aim

To design a simple 5-screen mobile app for booking a bus ticket (Bengaluru → Chennai) and check how easy it is to use.

Software Used

- Figma (UI design tool)

Procedure

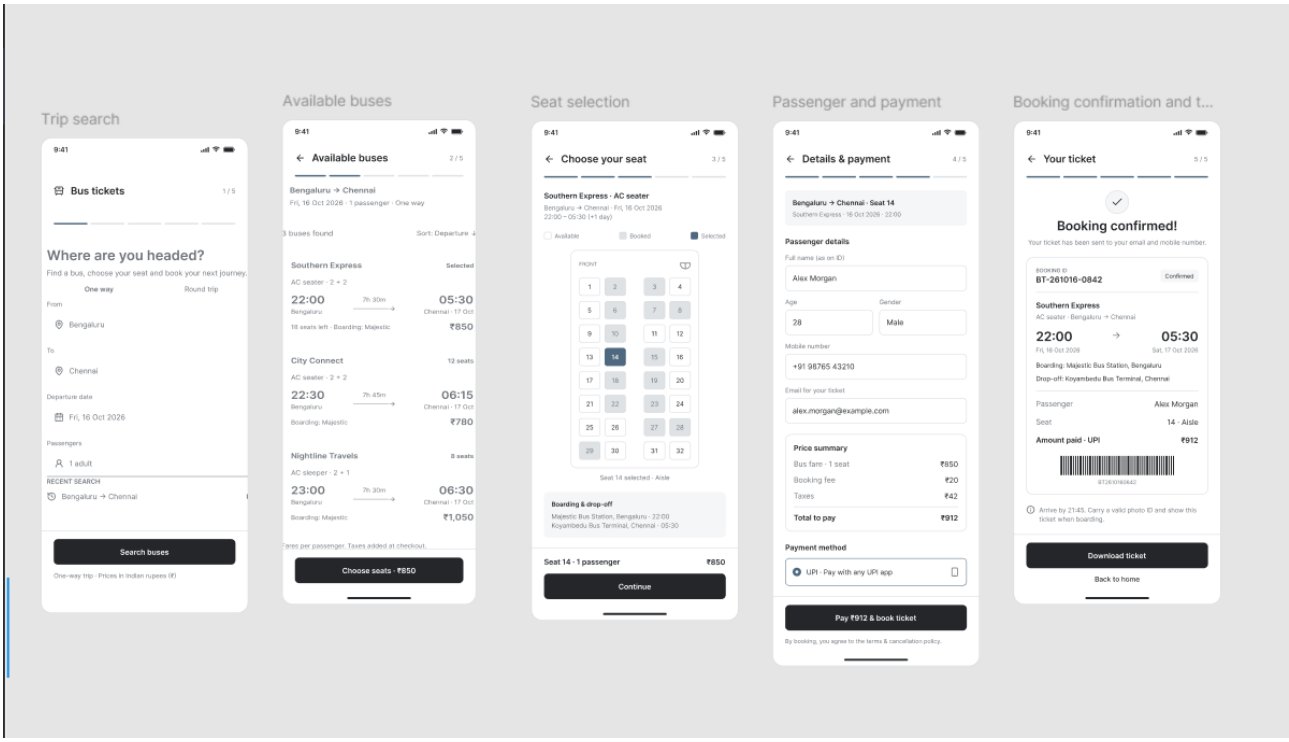

1. Planned 5 steps: search, choose bus, choose seat, pay, get ticket.
2. Made one phone screen for each step.
3. Added a progress bar (1/5 to 5/5) and a back arrow on every screen.
4. Used the same colours and buttons on all screens.
5. Checked each screen for good points and problems.

Observation

- Search screen: enter From, To, date and passengers.
- Bus list: 3 buses with time and price (₹780 to ₹1,050).
- Seat screen: seat map with Available, Booked and Selected seats. Seat 14 chosen.
- Payment screen: passenger details; fare ₹850 + fee ₹20 + tax ₹42 = ₹912; pay by UPI.
- Ticket screen: booking confirmed with booking ID and barcode.
- Good: clear steps, price shown clearly, same look everywhere.
- To improve: add bus filters, make booked seats easier to see, add more payment options.

Output

Five connected screens for the full booking.

Result

The design lets a user book a bus seat for ₹912 in 5 easy steps. Adding filters, clearer seats and more payment options will make it better.
